

# Delivery Pilot — One-Screen Landing Page

*Built to fit a single scroll. Same embedded-delivery voice. Hero → the pain → what you get → proof → one call to action.*

## HERO

**Your last production outage wasn't a technology failure. It was a delivery failure.**

An expired certificate takes down production. A key person leaves and the AI project stalls. Most enterprise AI initiatives don't die on strategy — they die on execution.

Delivery Pilot embeds a certified pilot inside your team to close the skills gap *while the work ships*. You get delivery capability that stays after we leave.

**[Find your delivery gap]**

## THE PAIN

Missing specialised skills. Mounting technical debt. No one who can answer *"what do we do with this, here, on our systems?"*

That gap between "we should use AI" and something running safely in production is where projects stall. Closing it is the whole job — and it's the part most programs skip.

## WHAT YOU GET

A pilot who works *in* your team, not a platform to learn.

**Ships in your environment** — real solutions on your systems, your constraints, your code. **Hardens security and debt as it builds** — GDPR, SOC 2, HIPAA and maintainability handled in-flight, not bolted on. **Transfers the skill, not just the code** — your team can build the next one without us. **Certifies who carries it forward** — you know exactly who's qualified when we hand off.

## PROOF

*(Fill with real figures — these placeholders are the difference between claimed and recognised value.)*

**[N] preventable outages eliminated · [N] teams certified to deliver independently · [N]% faster to a maintainable production deployment**

# CLOSE

**Stop losing AI projects to execution.**

Put a pilot in your team and close the gap by shipping.

**[Assess your delivery readiness]**
